

6 THINGS TO STAY AWAY FROM WHEN SELECTING YOUR NEXT SCHOOL/COLLEGE LMS

With so many types of Institutions, multiplied with so many types of learning needs, it's hard to find the perfect LMS for your school or college. To help you get started, there are few things to avoid when selecting your School/College LMS. Infographic below presents some features you should definitely NOT want in your future LMS.

AVOID COMPLEX SYSTEMS

A difficult to use LMS comes with frustrations for all users, as training teachers and admins becomes a cumbersome and costly endeavor. You should avoid a complex LMS.

AVOID CLUMSY DESIGN (UX/UI MATTERS)

1995 feels like it ended a century ago. Responsive design is the living future and if an LMS is stuck in the "olden days" of set widths, just back away immediately. User Experience & User Interface makes a huge difference in digital experience.

MORE FEATURES DOESN'T MEAN BETTER LMS

Unnecessary features only clutter the interface and having to pay for them makes things even worse. Make sure you can customize the LMS according to the specific needs of your organization.

NO CROSS PLATFORM CONNECTIVITY

Most LMS are so rigid that they have no way of connecting to your other applications and increases data redundancy. You want a LMS that can share some data pool from your other applications. Eg. LMS accessing student data from your ERP and vice-versa.

DIG OUT THE HIDDEN COSTS

Unnecessary features, implementation fees, mandatory training, testing and bug fixing or customer support can all be subject to extra payment. Be sure to know exactly what you pay for.

NO FREE TRIALS? NO DEAL!

Product Demos are just not enough, with so many software companies trying to jump in to LMS, it's hard to say what works and what doesn't. Get a free trial and make an in-depth use of it. The only way to tell which system is your champ!
